

PLUM CREEK BUILDERS
GENERAL CONTRACTOR

Plum Creek Builders offers energy-efficient homes that qualify for the ENERGY STAR® label. Look for these performance advantages:

Lower utility bills

You have more important things to spend money on than utility bills. The energy-efficient features of our ENERGY STAR qualified homes will decrease your bills and save you money every month.

Comfort and quiet

Your family will love the relaxing comfort of our homes. Tight construction, better windows, and improved insulation not only keep out excessive heat, cold, and noise, but also ensure consistent temperatures between and across rooms.

Lower maintenance

Enjoy the peace of mind that comes with a low-maintenance home. Tight construction and long-lasting, efficient equipment make our homes more durable, preventing a lot of the maintenance headaches you'll find in typical homes.

Protect the Environment

Purchasing a new ENERGY STAR qualified home is a decision you can be proud of. Our homes help reduce our nation's energy needs and prevent air pollution by consuming less energy.

Healthier indoor air

Your family will breathe easier in one of our ENERGY STAR qualified homes. Tight construction and proper ventilation work together to keep dust, pollen and pests out of your home.
